

Choose one assignment.

Assignment 1: Beer widgets

General requirements

- Use the latest fresh Drupal version.
- Use composer template.
- You can use any contrib module you want.
- Create instructions for running the project: ddev/config.yml or docker-compose file is nice to have.
- Think about performance / caching.

Beer of the day

- Create random beer widget (block) to be inserted on any page.
- Get random beer data from this API <https://punkapi.com/documentation/v2>
- Display beer title, image, tagline, abv.

Beer by dish

- Create widget with search input field to be inserted on any page.
- Using <https://punkapi.com/documentation/v2> , search for a beer matching specified dish (for ex. beef taco, poached egg).
- Display the first 3 results. Show beer title, image, tagline, abv.

Assignment 2: Cat widgets

General requirements

- Use the latest fresh Drupal version.
- Use composer template.
- You can use any contrib module you want.
- Create instructions for running the project: ddev/config.yml or docker-compose file is nice to have.
- Think about performance / caching.

Cat of the day

- Create random cat widget (block) to be inserted on any page.
- Get a random cat picture from this API <https://docs.thecatapi.com/>
- Display the image
- **For extra points** add the vote up and down buttons

Cat by breed

- Create widget with search input field to be inserted on any page.
- Using <https://docs.thecatapi.com/> search for a cat matching specified race using a dropdown.
- Display first 3 photos. Display cat race name, images, temperament, description and wikipedia link.
